Editorial

- 41 Early career nurse researchers: insights, challenges and strategies for success

Resources

- 43 Resources page

Research made simple

- 45 What is a process evaluation when used alongside a randomised controlled trial?

Evidence for nurse education

- 48 Impact of moral distress on early career nurses: an integrative review

Commentaries

Women's health and midwifery

- 50 Scoping review suggests that reasons for choosing unassisted birth ('freebirth') vary depending on income, previous negative health care experiences and personal and cultural beliefs
- 51 Evidence to support targeted investment in breastfeeding education among families of low socioeconomic status
- 52 Infertility and poor reproductive outcomes as potential predictors of early and premature menopause: let's act before it would be too late!

Health promotion and public health

- 53 How healthy dietary patterns have an impact on overall and cause-specific mortality?
- 54 Better cardiovascular health for a longer life without major diseases

Nursing issues

- 55 Engaging clinicians in research: barriers, benefits and building a blueprint
- 56 Scoping review of contributors to fatigue and medication administration errors among nurses
- 57 Unravelling the complexities of nutritional behaviours in hospital nurses: a commentary on enablers and barriers to healthy eating

Child health

- 58 Nurturing healthy futures: unveiling promising policy avenues to tackle root causes of poor health in early years
- 59 Clinicians signal the need to improve competency in the care of patients who identify as LGBTQ+
- 60 Non-English speakers are not adequately represented in paediatric research
- 61 Low-quality evidence for medication errors reduction strategies in hospital paediatrics

Adult nursing

- 62 Patient-centered perspectives in diabetic retinopathy care: phenomenology and practice

April 2024 Volume 27 Issue 2

- 63 Smoking cessation interventions are cost-effective in people affected by stroke
- 64 Are we ready for prehospital troponin testing by paramedics?
- 65 Ghost in the inbox: AI may help alleviate the burden of patient messages
- 66 Social prescribing integrated in primary care enhances access to type 2 diabetes preventative approaches among high-risk patient population
- 67 Trajectory patterns of self-care behaviour over 1 year provide nurses insights to tailor individualised care for patients with heart failure

Mental health

- 68 Trust and confidence of clinical staff and patients is crucial for the successful introduction of artificial intelligence (AI) in mental healthcare
- 69 Literature suggests gaps in evidence-based PRN medication practices in acute mental healthcare
- 70 Factors that enable or hinder the rebuilding of the therapeutic relationship following an episode of physical restraint in acute forensic services
- 71 Strategies for supporting mental health nurses' applications of trauma-informed care

Nurse education

- 72 Death education: the importance of terror management theory and of the active methods
- 73 Improving nutritional care for older adults: the role of massive open online courses and implementation science in enhancing health professional knowledge and attitudes
- 74 Cultural competence in nursing education: examining the nexus of cultural sensitivity and effectiveness among nursing students

Intellectual disability nursing

- 75 Supportive environment is key to self-determination for people with severe or profound intellectual disabilities

Care of the older person

- 76 Gender differences found in fall-related factors among community-dwelling Korean older adults
- 77 Can falls as a behavioural marker indicate development of dementia down-line?

Palliative care

- 78 Digital assets should be included in advance care planning discussions for patients receiving palliative care
- 79 Who gets to die at home? Race and disease-related cause of death impacts young adults' place of death
- 80 Contribution of cultural behavioural patterns and family-informed interventions in cancer-related fatigue
